

Temperature Time-Series of some Brazilian cities

Jaqueline Bitencourt

Problem Motivation

About the IPCC

The Intergovernmental Panel on Climate Change (IPCC) is the United Nations body for assessing the science related to climate change.

Data

- **Temporal series of temperatures from some Brazilian cities:** Belém, Curitiba, Fortaleza, Goiânia, Macapá, Manaus, Recife, Rio de Janeiro, Salvador, São Luiz, São Paulo, Vitória
- The content is provided by NOAA GHCN v4 and post-processed by NASA's GISTEMP v4
- The time series provides temperature records by month for each year

Data

YEAR	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC	D-J-F	M-A-M	J-J-A	S-O-N	metANN
1961	26.09	27.29	27.08	26.35	999.90	22.58	21.90	23.14	25.10	24.92	25.41	25.54	26.25	25.92	22.54	25.14	24.96

1982	999.90	26.86	999.90	999.90	999.90	23.82	22.23	22.63	22.13	23.83	26.23	999.90	999.90	999.90	22.89	24.06	999.90

Questions to answer

- How are temperatures in Brazilian cities? Too hot? Cold weather sometimes?
- What about climate changes? Is Brazil getting hotter?
- What will be the temperatures for the **next five, ten, fifteen years**?
- What are the cities with **similar average temperatures**?

Proposed approach

- Using the ARIMA and SARIMA algorithms to perform forecasts
- Using the K-Means algorithm with DTW metric to perform clustering

Expected results

- Providing an interactive dashboard with temperature time-series
- Providing forecasting and clustering of temporal series
- Allowing the comparison of different time-series
